Recommendations

- Apply a quaternary disinfectant to all high touch areas and allow to dwell to dry on a regular basis.
- Use DIS.IN.FX® proactively for ongoing Treatments.
- Continue to educate everyone on the importance of good hygiene and proper handwashing techniques.
- There should be a notable decrease in the spread of infections throughout the facility when a disease is introduced. If there are any unusual or prolonged cases of illness contact DIS.IN.FX® for consulting and testing.
- The highest risk areas for infection will come from airborne or foodborne diseases.

- Personal hygiene plays a key role in reducing the spread of infections. Showering, washing hands frequently, and the use of hand sanitizer when hand washing is not available are proactive measures that can be taken by everyone.

DIS.IN.FX® Guarantee and Consulting Commitment

The DIS.IN.FX® Guarantee includes FREE consulting on best practices for sanitation and disinfection, evaluation of current infection prevention program, product reviews and general advice and is valid for 90 days after a treatment.

In addition to the included FREE Consulting, outbreaks or the spread of infectious diseases will be addressed. DIS.IN.FX® commits to implementing a collaborative course of action to remedy any issues in the treated areas.

The course of action will be determined by identifying the scope of the issue at hand. The scope will be determined through a process of interviewing key individuals, surface testing, visual inspections, and conversations with decision makers.

Once the scope is identified by DIS.IN.FX® a collaborative course of action will be determined and mutually agreed upon by the client and DIS.IN.FX® up to and including a full Antimicrobial Treatment. There are no additional charges or fees involved with the DIS.IN.FX® Guarantee.
